### Descriptions :

- The Chip-LED Taping is much smaller than lead frame type components, thus enable smaller board size, higher packing density, reduced storage space and finally smaller equipment to be obtained.
- Besides, lightweight makes them ideal for miniature application, etc.

### Soldering heat reliability (DIP):

Please refer to the following figure:

#### Precautions For Use :

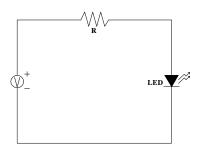

Over – current – proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen)

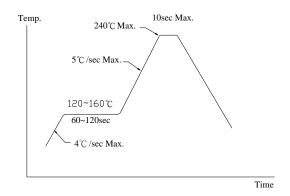

- Storage
- 1. The operation of temperature and R.H. are :  $5^{\circ}$ C  $\sim 30^{\circ}$ C, 60%R.H. Max..
- 2. Once the package is opened, the products should be used within a week. Otherwise, they should be kept in a dampproof box with desiccating regent. Considering the tape life, we suggest our customers to use our products within 1.5 year (from production date).
- 3. It's recommended to bake before soldering when the package is unsealed after 72 hrs. The condition is :  $60^{\circ}\text{C}\pm5^{\circ}\text{C}$  for 15hrs.
